                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                The present invention describes a peptide (1) comprising an isolated surface exposed group/epitope (EI) of C-epsilon-2 domain (D) of immunoglobuline (198b) or its mimotopen. Also described are: (1) an immunoglobuline (198b) or its mimotopen. Also described are: (1) an immunogen (II) for treating allergies comprising (II); (2) a vaccine (III) for treating allergies comprising (II); (3) a ligand (IV) capable of period of paramaceutical composition (PC) comprising (IV); (2) a peptide (1a) capable of being recognised by (IV); (6) an immunogen (IIa) comprising (Ia) and (7) producing (II) by producing (II). (1) can have antial-ergot and immunosuppressive activities, and can be used as a vaccine and histamine release inhibitor. (I), (II) and (III) are useful in medicine and in the manufacture of redicaments for treating an existence of preventing allergies. (IV) is useful for treating medicaments for treating allergies. (IV) is useful in diagnostics and in the affinity purification of circulating antibodies from blood. (I), (III) and PC are useful for treating a patient susceptible to or suffering from allergies. (IV) is also useful in diagnosing atopy. AAB2899 represent

The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce

biological and immunological constructs. The invention provides a
method for linking an epitope (e.g. a peptide) to a carrier (e.g. a
protein) for use in a pharmaceutical composition or a vaccine. The
invention describes peptides derived from or mimotopes of the
compositions of the invention are used to produce conjugated compounds. The compounds

compositions of the invention are useful in the manufacture of a
medicament for the treatment of IgE mediated diseases. The invention
allows for controlled conjugation of a peptide epitope (antigen) to a
protein so as to form an immunogenic conjugate which may be able to
craise a protective antibody response in an animal or human patient.

AAU16632-AA016913 represent peptides derived from or mimotopes of
the Cepsilon2/Cepsilon3/Cepsilon4 region of human IgE.
an immunogenic conjugate useful treatment of IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunogen; human; IgE; immunoglobulin E; allergy; thio-ether linkage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                0
                                     where the conjugate comprises a disulphide bridge cyclised peptide and an immunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogen derived from human immunoglobulin E (IgB) suttable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a peptide (I) comprising an isolated surface exposed group/epicope (E1) of C-epsilon-2 domain (D) of immunoglobulin E (19B), or its minotope. Also described are: (I) an immunogen (II) for treating allergy comprising (I), (2) a vaccine (III) for treating allergy comprising (I), (3) a ligand (IV) capable of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Peptides useful for treating, preventing and a-chievaling allergic diseases, comprising an isolated surface exposed group of a specific domain from immunoglobulin {\bf E} -

```
(5) a peptide (14) capable of being recognised by (17); (6) an immunogen (13) comprising (14); and (7) producing (111) by producing (11). (1) can have antiallergiz and immunosuppressive activities, and can be used as a vaccine and histamine release inhibitor. (1), (11) and (111) are useful in medicine and in the manufacture of medicaments for treating and preventing allergies. (17) is useful for identifying mimotopes of Pi, in medicine and also in manufacturing medicaments for treating allergies. (17) is useful in diagnostics and in the affinity purification of circulating anti-igs artibodies from blood. (1), (111) and PC are useful in diagnosting and in the affinity purification of circulating anti-igs artibodies from blood. (1), (111) and PC are useful in diagnosing atopy. ABS2807 to ABS2609 represent peptide sequences which are used in the exemplification of the present.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              an immunogenic conjugate useful treatment of IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. mercmonlecules, polymers, dendriners, proteins) to produce biological and immunological constructs. The invention provides a method for liking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide P5sh derived as mimotope of Cepsilon2 region of human IgE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, linkage technology, conjugated compound, carrier vehicle, epitope, Cepsilon2, Cepsilon3, Cepsilon4, immunoglobulin E, IgE mediated disease, antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   78.4%; Score 40; DB 21; Length 6; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a distilphide bridge cyclised peptide and an ammunogenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide immunogened from human immunoglobulin E (1gE) suitable to be cyclised and used in the invention.
Cepsilon2, Cepsilon3 or Cepsilon4 regions of human immunoglobulin E (IgE) which are used to produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a medicament for the treatment of 1gE mediated diseases. The invention allows for controlled conjugation of a peptide epitope (antigen) to a protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient. AAUL6612 AAUL6913 represent peptides derived from or innotopes of the Capsilon2/Cepsilon4 region of human [qs].

                                                                                                                                                                                                                                                              The cyclic peptide is one component of the peptides designated pseudosteralins A-G which have been extracted from Taishijin root. These peptides are tyrosinase inhibitors and melanin formation inhibitors which are useful in skin commetics. Pseudosteralins A, B, C, D, E, F and G demonstrated tyrosinase inhibiting IC50 values 131, 187, 63, 106, 175, 50 and 75 microM resp., compared with a value of 1.2 mM for arbutin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 10
The invention relates to methods of producing cyclic peptides which utilise the trans splicing ability of split inteins to catalyse of validation of a peptide from a precursor peptide. The procursor peptide has a target peptide interposed between two portions of a split intein. The interaction of the two portions of the split intein creates a catalytically active intein, and also forces the target peptide into a competituation that stabilises the ester isomer of the amino acid at the junction between one of the intein portions and the rarget peptide. Or the junction between one of the intein portions and the rarget peptide of form a cyclic ester intermediate. The active intein catalyses the coract peptide, which spontaneously rearranges to form the coract peptide, which spontaneously rearranges to form the carget peptide spontaneously rearranges to form the cyclic days and larked by the two portions of the spit intein; the carget peptide flanked by the two portions of the spit intein; the cyclic deptide flanked by the two portions of the minion of a larnat intermediate; methods of several molecules of the invention are used for making cyclic peptide; their and peptide of the invention are used for making cyclic peptides the present confined intermediates. The methods can be used for their cities the present the presence of a predetermined confined and periods of confidence of the present confined predetermined and arranged predetermined by the confined and peptides of confined the present confined predetermined and arranged predetermined by the confined present confined the present confined predetermined by the confined present confidence of the present confined predetermined by the confined confined by the confined predetermined by the confined confined by the present confined by the confined confined by the confi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ..

The invention relates to methods of producing cyclic peptides which utilise the trans splicing ability of split interior to catalyse cyclisation of a peptide from a precursor peptide. The precursor peptide has a target peptide interposed between two portions of a split interior. The interaction of the two portions of the split interior creates a catalytically active interior, and also forces the target peptide interior. The interior of the amine acid at the junction between one of the interi portions and the target peptide. A heteroatom from the other interior portions and the target peptide. Corm a cyclic ester intermediate. The active interior catalyses the form of an aminesuccinimide that liberates a cyclised form of the terracdynamically favoured backbone cyclic peptide product. The carget peptide, which spontaneously rearranges to form the therredynamically favoured backbone cyclic peptide product. The interior, aspected hasked by the two portions of the split. Interior, expression vectors and host cells comprising the nucleic acid interior, and methods of screening peptides. The nucleic acid molecules the invention are used for making cyclic peptides and peptide of the invention are used for making cyclic peptides and peptide of the invention are used for making cyclic peptides and peptide of the invention are used for making cyclic peptides and peptide of the invention are used for making cyclic peptides and peptide of the ability to specifically bind a target molecule. The present sequence represents pseudostellarin F in its linear form. Plasmids a paging and page molecules the ability to specifically interplant in a paging and an engage molecules. The present sequence represents pseudostellarin F in its linear form. Plasmids the present and periods and periods presented and periods and peri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Non-naturally occurring nucleic acid molecule encodes a target peptide produced in a host system in a cyclized form or as a splicing intermediate of the cyclized form -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
Split intein, peptide cyclisation, trans splicing, peptide library, peptide screening, cyclic ester intermediate, Ssp DnaE C-intein, plasmid pARCB-p; plasmid pARCBD-p; pseudostellarin F.

The peptide is an example of a synthetic peptide contg. a thiolactive cysteine residue and at least two positively charged amino active cysteine residue at the the N and/or C terminal sides of the thiolactive cysteine. The peptide is pref. amidated at the C-terminus. The peptides may be used in conjunction with an antibody complex comprising a domain specific for an antigenic determinant of a complex of human igh and alpha-lantitrypsin, for use in therapy of rheumatoid arthritis. Admin, is oral or parenteral.
                                                                                                                                                                                                                         New synthetic peptide(s) - cause dissociation or prevent formation of 19A-alpha-antitrypsin complex, useful for treating and preventing themstoid arthritis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes an isolated peptude of 100 uning acids or less in size. The peptide is useful for treating a disease state, e.g. cancer, arthitis, diabetes, inflammatory disease, atheroscierosis, auroimmune disease, bacterial infection, viral infection, cardiovascular disease or degenerative disease. This sequence represents a human targeting peptide selective for human organs, tissues or cell types.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New targeting peptides identified by phage display, useful for treating a disease state, e.g. cancer, diabetes, inflammatory disease, atherosclerosis, autoimmune disease, bacterial or vital infection or
                                                                                                                                                                                                                                                                                                                                                                                                                                   Targetting peptide selective for human organ, tissue or cell type #205.
                                              The peptide is an example of a synthetic peptide conty. a thiolactive cysteine residue and at least two postrively charged amino acid residues situated at the the N and/or C terminal sides of the thiolactive cysteine. The peptide is pref. amidated at the C terminus. The poptides may be used in conjunction with an antibody comprising a domain specific for an antigenic determinant of a complex of human 19A and alpha-lantitypsin, for use in therapy of rheumatoid arthritis. Admin, is oral or parenteral.
                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The peptide is an example of a synthetic peptide contg. a thiolactive cysteine residue and at least two positively charged amino acid residues situated at the the N and/or C terminal sides of the thiolactive cysteine. The peptide is pref. amidated at the terminus. The peptides may be used in conjunction with an antibody complex comprising a domain specific for an antigenic determinant of a complex of human IgA and alpha-lantitrypsin, for use in therapy of

equence encoded by the gene;

(iii) comprise 0.10 amino acid from the cathoxyl terminus of the normal pair of the protein sequence preceding the unino terminus of the normal pair of the protein sequence preceding the unino terminus of the mutant nequence and may further extend to the cathoxyl terminus of the mutant pair of the protein as determined by a new stop colon graciated by the first of the protein and determined by a new stop colon graciated by the rotation, and it is not fell (APC). The protein after processing by an action precenting cell (APC), The protein and the protein page of the same peptides are performed to the mutant of the protein and the protein sequence. The novel preprides can object The life protein and the protein and cannot be used franchish mutations. The novel peptides and DNA symmetry can be used franchish the propagation of a composition for the treather or preprint and composition for the treather or protein and pages.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptides AAY65684 Y66142 are fragments of mutant products arising from a framewhift mutation in a gene from a cancer cell. The peptides are characterised in that they:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in are at least 8 amino acids long and a fragment of a mutant protein arising from a frameshift mutation in a gene of a rance; cell; (ii) consist of at least one amino acid of the mutant part of a protein
                                                                                                                                   Human, frameshift mutant; T cell response; tumour; treatment; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New peptides derived from genes with frameshift morations, used to develop products for the treatment and prophylaxis of cancers \|\cdot\|_2

                                                                                                                                                                                                                                                                                                                                                 The present invention describes a peptide (1) comprising an isolated surface exposed group/epitope (B) of C-epsilon-2 domain (D) of immunogichaline (1986), or its mimotope. Also described are: (1) an immunogichaline (1986), or its mimotope. Also described are: (1) an immunogichaline (1986), or its mimotope. Also described are: (1) an immunogicality and alergies comprising (II); (2) a vaccine (III) for treating aliergies comprising (II); (3) a ligand (19) comprising (IV); (5) a periodic (1a) capable of being recognised by (IV); (6) an immunogen (II) and an ending (II) and (IV); (6) an immunogen (III) by producing (II); (1) and and histamine release inhibitor. (7) (17) and (III) are used as a vaccine and histamine release inhibitor. (7) (17) and (17) are useful in medicine and in the manufacture of medicaments for ireating and preventing also in manufacture of medicaments for ireating allergies. (1) is useful in diagnostics and in the affinity purification of control of the present are useful in diagnostics and the vacilering from allergies. (10) is also useful in diagnostic and are subjected to the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

The present invertion relates to linkage methodology for use in the conjugation of compounds (e.g. peptides) to carrier vehicles (e.g. macromolecules, polymers, dendrimers, proteins) to produce biological and immunological constructs. The invention provides a method for linking an epicope (e.g. a peptide) to a carrier (e.g. a method for linking an epicope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or minotopes of the invention describes peptides derived from or minotopes of the compositions of the invention are useful in the manufacture of a medicament for the treatment of impact of the invention are useful in the manufacture of a medicament for the treatment of IgE mediated diseases. The invention protein so as to form an immunogenic conjugate which may be able to raise a protective antibody response in an animal or human patient.

Abul6632-Abul6313 represent peptides derived from or mimotopes of the Cepsilon3/Cepsilon4 region of human 1gE.
                                                                                                                                                                                                                                                     an immunogenic conjugate useful treatment of IgE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      human; IgE; immunoglobulin E; allergy; thio-ether linkage;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

The present invention describes a conjugate (1) and its salts. (1) has the formula CT-LI-Sp1-Sp2-K, where: CT - cytotoxic radical or radical of a cytostatic derivative optionally also carrying a CB, CCB or NH2 group, LI - linker comprising 5 to 8 amino acids each optionally carrying protecting groups; Sp1 = absent, CO or CS, Sp2 = optionally carrying protecting groups; Sp1 = absent, CO or CS, Sp2 = optionally carrying arylene or alkylene; and K = unsubstituted or regions factively modified carbohydrate radical. Also described: (1) a piocess for preparation of the conjugates; (2) a medicament comprising the conjugate. (1) has cytostatic activity. The conjugates are useful for treating cancer. The conjugate is cleaved by enzyms found especially in turbur lissue to release the cytotoxic drug. As the drug is not active until after cleaved it will not cause harm to non-turbour proliferation of therefore reducing the side-effects associated with the ner of such
                                                                 where the conjugate comprises a disuiphide bridge cyclised peptide and an immunogent carrier. The vaccines can be used in the treatment of allorgies. The present sequence is a peptide immunogen derived from human immunoglobulin E (198) suitable to be cyclised and used in the invention.
                                                  The present invention relates to conjugates suitable for use in vaccines,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic-glycoconjugates useful for preating march have specifically cleavable peptide linking units so as to deliver drug to tumor only
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "C-terminally modified with campitathetin PPA"

The conjugates of the invention may have cytostatic activity and may be used as an integrin alpha vbeta i receptor antagonist or a tumour growth inhibitor. The conjugates of the invention may be used in the production of a medicament for the treatment of carcinomatous disorders. Compounds of the invention containing the conjugates of the invention exhibit a selective and tumour-specific action as a result of linkage to
drugs. The present sequence represents a camptothecin peptide conjugate, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         alpha_vbeta_1 integrin antagonists via linking units which can be selectively cleaved by enzymes such as metallo matrix proteases, i.e. enzymes found in turour tissue. The linking units can also raintain the serum stability of the conjugate of cytostatic and alpha_vbeta_1 integrin antagonist, and at the same time, show the despixed intracellular action within tumour cells as a result of its specific enzymatic and hydrolytic cheavability with release of the cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New conjugates of integrin receptor antagonist and a cytostatic agent with specific cleavable linking unit useful in the treatment of cancer
                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (a) activation of neutrophils; (b) activation of inhibition of T-cells, B-cells, NK cells, LAK cells, dendritic cells or other immune system cells; (c) proliferation and/or differentiation of the above cells, including epithelial cells; (d) icontypic and/or here.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (e) adhesion of CD66 family members to other ligands. The peptide is useful in modulating the function of CD66 family members and/or their ligands, such as activation of neutrophils and activation, inhibition, proliferation and/or differentiation of the immune cells. The peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           may also be used in treating or diagnosing autoimmune diseases, cancer, infections (e.g. bacterial or viral) or inflammatory diseases, in transplantation therapies and for immunisation.
